

Unit : Intestinal stasis in cattle

Lesson : 2

Clinical investigation

Dr. G. Vijayakumar, M.V.Sc., Ph.D., PGDECM

Professor

Veterinary University Peripheral Hospital

Madhavaram Milk Colony

Chennai-600 051

Tamil Nadu Veterinary and Animal Sciences University

Restraining of the cattle

Thoracocentesis / Pleurocentesis

- Site: 6th or 7th intercostal space below the level of the fluid line

Thoracocentesis / Pleurocentesis

Thoracocentesis / Pleurocentesis

Thoracocentesis / Pleurocentesis

Normal

- Small volumes – clear to slightly turbid
- yellowish
- Non clotting
- Bacteriologically sterile
- Nucleated cells $< 10 \times 10^9/\text{litre}$
Neutrophils, mononuclear/ mesothelial –type cells/ lymphocytes

Thoracocentesis / Pleurocentesis

Complications

Rare but include

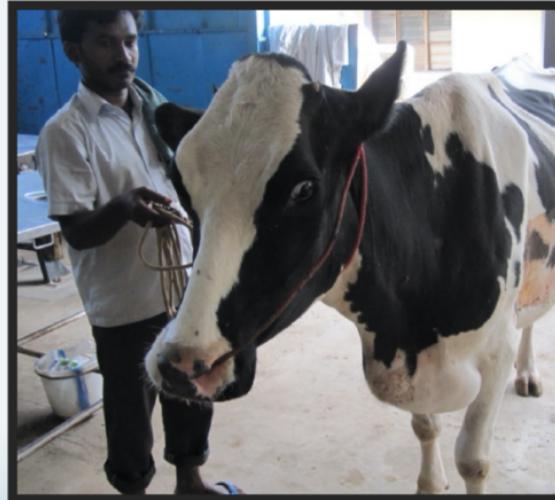

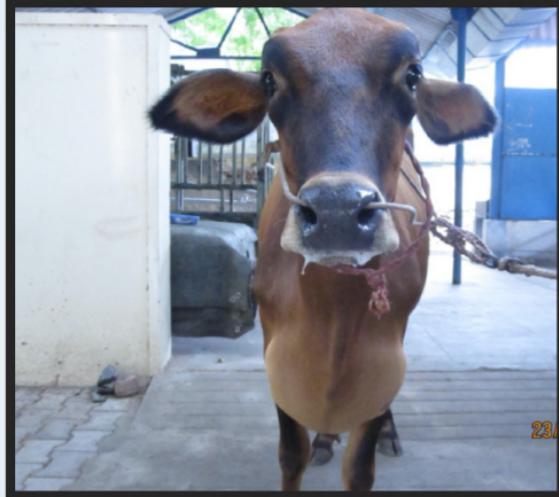

- Collapse of animal
- Pneumothorax
- Puncture of lung/ heart

Pericardiocentesis

- Site: 4th or 5th intercostal space

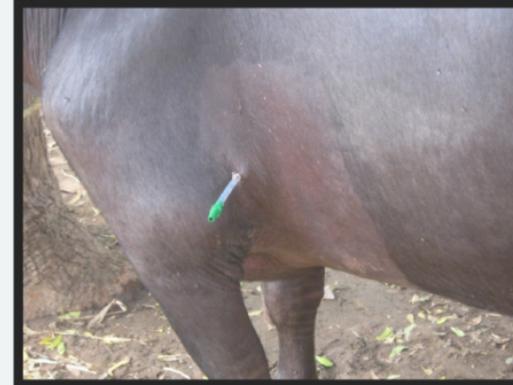

Pericardiocentesis

Pericardiocentesis

Pericardiocentesis

Abdominocentesis

Paracentesis abdominis

Indications

- Ascites
- Peritonitis
- Uroperitoneum
- Neoplasia

Paracentesis abdominis

Site

- 8-10 cm caudal from xiphoid sternum and
8-10 cm lateral from the midline

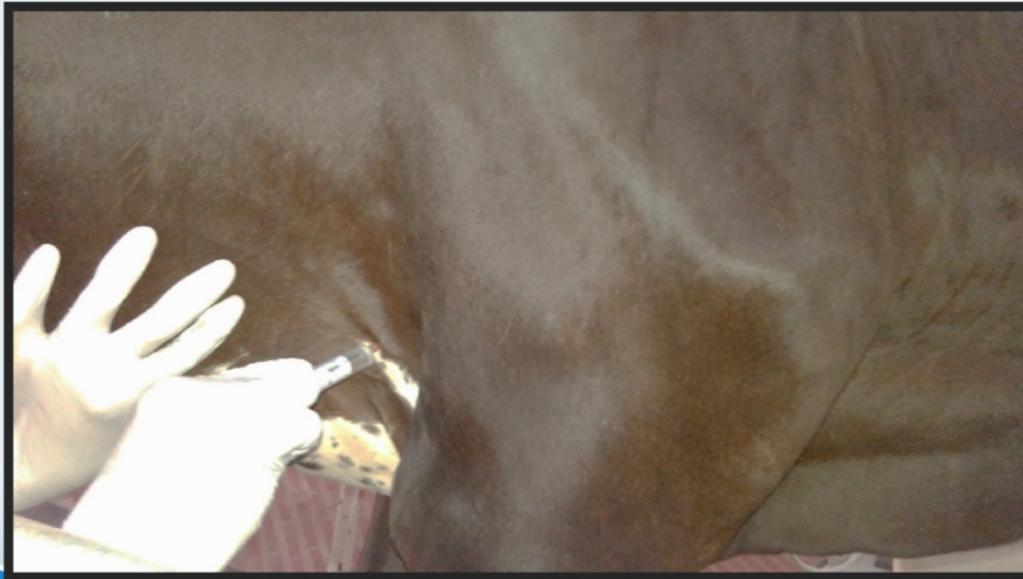

Paracentesis abdominis

- Amber coloured- Normal
- Cloudy- Increased concentration of protein
- Serosanguineous - Ischemic necrosis of intestine
- Turbid fluid containing particulate material
 - Perforated abdomen

Thoraco- reticulocentesis

- To diagnose DH
- Right side of the thorax
- Area of the peristaltic sound
- 16 G needle
- Aspirate and examine
- pH and protozoa

Thoraco- reticulocentesis

Liptak test

Clinical pathology

- CBC: inflammatory changes common
- Serum biochemistry: hyperglycemia, hyponatremia, hypochloremia, hypokalemia, hypermagnesemia

Thank
you
